э

MOTIVATION

• Contingent Valuation is a survey-based economic technique for the valuation of non-market goods.

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

伺 ト イ ヨ ト イ ヨ ト

MOTIVATION

- Contingent Valuation is a survey-based economic technique for the valuation of non-market goods.
- It is conventionally agreed that besides economic factors, *psychological and attitudinal aspects* also play an important role in the individual elicitation and decision-making process.

伺下 イヨト イヨト

MOTIVATION

- Contingent Valuation is a survey-based economic technique for the valuation of non-market goods.
- It is conventionally agreed that besides economic factors, *psychological and attitudinal aspects* also play an important role in the individual elicitation and decision-making process.
- "Protest bids are valuations that are intended to express displeasure with some part of contingent market rather than to reveal true preferences."(Edwards&Anderson, 1987)

MOTIVATION

- Contingent Valuation is a survey-based economic technique for the valuation of non-market goods.
- It is conventionally agreed that besides economic factors, *psychological and attitudinal aspects* also play an important role in the individual elicitation and decision-making process.
- "Protest bids are valuations that are intended to express displeasure with some part of contingent market rather than to reveal true preferences."(Edwards&Anderson, 1987)
- The protest beliefs of respondents are identified by their answers to the attitudinal questions (protest indicators).

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

▲ □ ▶ ▲ □ ▶ ▲ □ ▶

MOTIVATION

There are two approaches to treat protest beliefs:

- 1. Continuous Approach
 - a) Additive Index
 - b) Latent Variable Model (LVM)
- 2. Discrete Approach
 - a) Ad Hoc Criteria
 - b) Latent Class Model (LCM)

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

- 1. Continuous Approach
 - a) Additive Index
 - all attitudinal questions that represent protest beliefs are summed up.

3

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

1. Continuous Approach

a) Additive Index

- all attitudinal questions that represent protest beliefs are summed up.

< 日 > < 同 > < 三 > < 三 >

э

Examples

Meyerfoff and Liebe (2006) and (2008), among others.

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

1. Continuous Approach

a) Additive Index

- all attitudinal questions that represent protest beliefs are summed up.

▲ □ ▶ ▲ □ ▶ ▲

Examples

Meyerfoff and Liebe (2006) and (2008), among others.

Problem

each attitudinal question is given equal weight.

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

- 1. Continuous Approach
 - b) Latent Variable Model
 - attitudinal questions that represent protest beliefs are used to construct a latent variable.

< 日 > < 同 > < 三 > < 三 >

3

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

1. Continuous Approach

b) Latent Variable Model

- attitudinal questions that represent protest beliefs are used to construct a latent variable.

3

Examples

Jorgensen and Syme (2000), among others.

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

1. Continuous Approach

b) Latent Variable Model

- attitudinal questions that represent protest beliefs are used to construct a latent variable.

< A >

Examples

Jorgensen and Syme (2000), among others.

Problem

not possible to identify NON-PROTESTERS.

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

- 2. Discrete Approach
 - a) Ad Hoc Criteria
 - respondents are removed from the sample based on some criteria.

(日) (同) (日) (日) (日)

3

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

MOTIVATION

2. Discrete Approach

a) Ad Hoc Criteria

- respondents are removed from the sample based on some criteria.

э

MOTIVATION

The contribution of this paper:

 (i) to compare alternative approaches for treating protest beliefs in terms of the estimated WTP and statistical performance (Ad Hoc Criteria, LVM and LCM).

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

・ 同 ト ・ ヨ ト ・ ヨ ト

MOTIVATION

The contribution of this paper:

- (i) to compare alternative approaches for treating protest beliefs in terms of the estimated WTP and statistical performance (Ad Hoc Criteria, LVM and LCM).
- (ii) to relax the within-class homogeneity assumption of the LCM by combining the features of the LVM and the LCM, estimating the FMM.

CASE STUDY

- Information was collected in 2006 in Douro Valley region, Portugal.
- In order to preserve the current landscape the farmers need to be compensated for the cost otherwise this landscape will be changed.
- The data contains 706 observations based on face-to-face interviews.

Questionnare: CV Answer

• Taking into account your income and expenses of your family, would you be willing to pay **XX** euros every year to guarantee the preservation of the current landscape?

ロト ・ 同ト ・ ヨト ・ ヨト

- 4 同 2 4 回 2 4 U

CASE STUDY

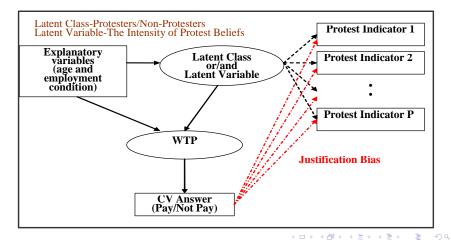

Questionnare: Attitudinal Questions (Protest Indicators)

- Q4. The landscape should be preserved with the current taxes
- Q5. I think this payment will be used for other purposes
- Q8. It is not fair to ask to pay
- **Q10.** This payment will not insure the preservation the landscape
- **Q11.** I already pay enough taxes for this preservation

Likert Scale 1=strongly disagree to 5=strongly agree

< 日 > < 同 > < 三 > < 三 >

3

ESTIMATION RESULTS

- ⇒ the intensity of protest beliefs is not significant in the CV part of the LVM and the FMM (value vs. distribution???).
- \Rightarrow the presence of heterogeneity within class
- ⇒ the median willingness-to-pay for the LVM (10.45), the LCM (8 vs 13.4) and the FMM (4.63 vs 14.02).
- ⇒ young and employed people have higher protest beliefs.
- \Rightarrow justification bias is significant for the LVM, the LCM (Non-Protesters) and the FMM (Non-Protesters).

METHODOLOGY (Latent Variable Model)

CV Answer Part:

$$u_n = \begin{cases} 1 & \text{if } \mathbf{WTP}_n > \mathsf{Bid}_n \\ 0 & \text{otherwise} \end{cases}$$

$$\mathbf{P}_u(\mathbf{u}_n = \mathbf{1} | \mathbf{Z}_n, \mathbf{X}_n^*, Bid_n) = \mathbf{F}(\boldsymbol{\beta}_1 \mathbf{Z}_n + \boldsymbol{\beta}_2 \mathbf{X}_n^* + \boldsymbol{\beta}_3 \ln(Bid_n))$$

$$\mathsf{Med}(\mathsf{WTP}_n) = \exp\left\{-rac{eta_1 \mathsf{Z}_n + eta_2 \mathsf{X}_n^*}{eta_3}
ight\}$$

 $Med(WTP_n)$ -the median willingness to pay for an individual *n*. Bid_n -the randomly assigned bid to an individual n. \mathbf{Z}_n -the social-econimic charachteristics of an individual *n*. **X**^{*}_n-the latent variable that represents protest beliefs of an • • = • • = • individual n Maria A. Cunha-e-Sá, Luis C. Nunes, Vladimir Otrachshenko

Protest Beliefs in Contingent Valuation: LVM and LCM

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

Latent Variable:

$$\mathsf{I}_n^* = \Theta \mathsf{Z}_n + \Lambda \mathsf{X}_n^* + \Psi u_n + arepsilon_n$$

 $\mathbf{X}_n^* = \Pi \mathbf{X}_n^* + \Phi \mathbf{Z}_n + \boldsymbol{\xi}_n$

Likelihood Function:

$$\mathbf{L}(\boldsymbol{\theta}) = \prod_{n=1}^{N} \left(\begin{array}{c} \int\limits_{X^*} \prod_{i=1,2} \mathbf{1}(\mathbf{u}_n = \mathbf{i}) \mathbf{P}_u(\mathbf{u}_n = \mathbf{i} | \mathbf{Z}_n, \mathbf{X}_n^*; \boldsymbol{\beta}, \boldsymbol{\sigma}) \times \\ \times \mathbf{g}_I(\mathbf{I}_n | \mathbf{Z}_n, \mathbf{X}_n^*; \boldsymbol{\Lambda}, \boldsymbol{\Sigma}_{\varepsilon}) \mathbf{g}_{\mathbf{X}^*}(\mathbf{X}_n^* | \mathbf{Z}_n; \boldsymbol{\Pi}, \boldsymbol{\Phi}, \boldsymbol{\Sigma}_{\xi}) \mathbf{d} \mathbf{X}_n^* \end{array} \right)$$

 $\boldsymbol{\theta} = (\boldsymbol{\beta}_1, \boldsymbol{\beta}_2, \boldsymbol{\beta}_3, \boldsymbol{\Theta}, \boldsymbol{\Lambda}, \boldsymbol{\Phi}, \boldsymbol{\Sigma}_{\mathcal{E}}, \boldsymbol{\Sigma}_{\boldsymbol{\xi}}, \boldsymbol{\tau}, \boldsymbol{\sigma})^{\scriptscriptstyle |} \text{ is a vector of the parameters of the model }.$

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

METHODOLOGY (Latent Class Model)

CV Part:

$$u_n = \begin{cases} 1 & \text{if } \mathbf{WTP}_n^c > \text{Bid}_n \\ 0 & \text{otherwise} \end{cases}$$
$$\mathbf{P}_u(\mathbf{u}_n = \mathbf{1} | \mathbf{Z}_n, \text{Bid}_n, c) = \mathbf{F}(\boldsymbol{\beta}_1^c \mathbf{Z}_n + \boldsymbol{\beta}_2^c \ln(\text{Bid}_n))$$
$$\text{Med}(\mathbf{WTP}_n^c) = \exp\left\{-\frac{\boldsymbol{\beta}_1^c \mathbf{Z}_n}{\boldsymbol{\beta}_2^c}\right\}.$$

c- the latent class. Med(**WTP**_n)-the median willingness to pay for an individual *n*. Bid_n-the randomly assigned bid to an individual *n*. \mathbf{Z}_n -the social-econimic charachteristics of an individual *n*.

MOTIVATION CASE STUDY METHODOLOGY ESTIMATION RESULTS CONCLUSION APPENDIX

Latent Class:

$$\mathbf{I}_{n}^{*} = \Theta^{c} \mathbf{Z}_{n} + \Psi^{c} u_{n} + \varepsilon_{n}^{c}$$
$$\mathbf{P}(c_{n} = c | \mathbf{Z}_{n}) = \frac{e^{\delta^{c} + \gamma^{c} \mathbf{Z}_{n}}}{\sum_{c=1}^{C} e^{\delta^{c} + \gamma^{c} \mathbf{Z}_{n}}} \quad \text{for } c = 1, ..., C$$

Likelihood Function:

θ

$$\mathbf{L}(\boldsymbol{\theta}) = \left(\prod_{n=1}^{N} \sum_{c=1}^{C} \prod_{i=0,1} \mathbf{1}(u_n=i) \mathbf{P}(u_n=i | \mathbf{Z}_n, \operatorname{Bid}_n, c) \times \\ \times \mathbf{g}(\mathbf{I}_n | \mathbf{Z}_n, c) \mathbf{P}(c_n=c | \mathbf{Z}_n) \right)$$
$$= \{ (\boldsymbol{\beta}_1^c, \boldsymbol{\beta}_2^c, \Theta^c, \Psi^c, \boldsymbol{\Sigma}_{\varepsilon}^c, \tau^c, \delta^c, \gamma^c)', c = 1, 2, ..., C \} \text{ is a vector of arameters.}$$
