

ARE 495 (002)

ENERGY ECONOMICS AND POLICY

This course provides an overview of energy markets from an economics perspective. Specifically, we will cover markets related to the production and consumption of oil, natural gas, coal, and electricity. In addition to discussing general supply/demand conditions and market structures of these goods, we will also consider various regulations that impact these markets. The goal is that this class will help students frame the many interesting policy debates surrounding various forms energy consumption and production using tools commonly employed in economic analysis.

Fall 2017
Monday/Wednesday
3:00 - 4:15 PM

Professor
Dr. Harrison Fell

For ABM & BBM majors
course will count as
either an ARE,
restricted, or free
elective. Course will fit
in the elective
requirement for the
ABM minor. Students
pursuing majors or
minors in Economics
should consult with the
Director of
Undergraduate
Programs in Economics
about including 400
level ARE courses in
their program.
